Announcing SAFEmail Version 3

Boldon James' SAFEmail Version 3 demonstrates our Secure Information Exchange architecture aligned to Microsoft's Unified Messaging platform

Maidenhead, Berkshire, U.K. – 30th September 2007 – Boldon James, a leading provider of Secure Messaging solutions, today announces the release of SAFEmail Version 3, based on our new future architecture.
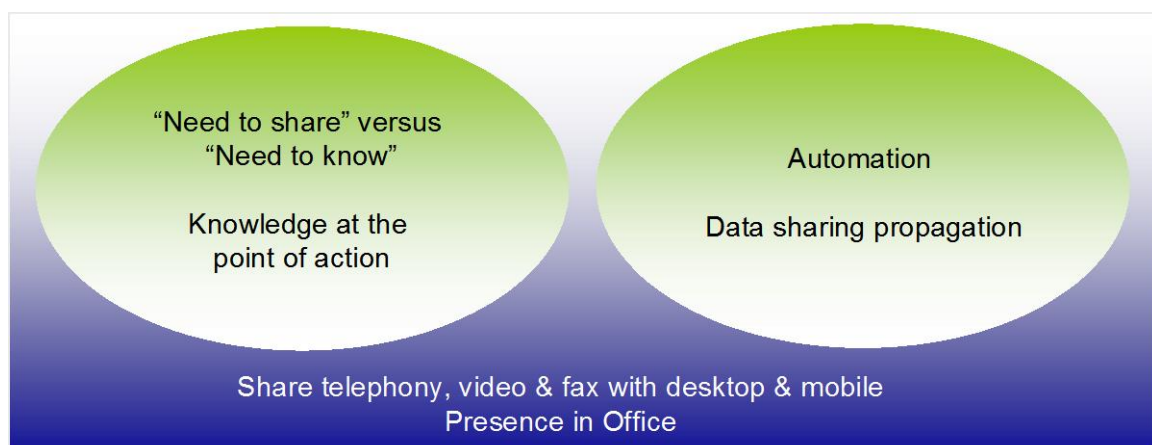

"This new architecture is a fundamental cornerstone of our strategic vision, which is based on our understanding of the market and how it has evolved over the last 8 years since we won the worlds first contract for a 'COTS based Email plus secure attachment system' with Microsoft in the U.S." commented Kieron Sambrook-Smith, Global Sales & Marketing Director

Boldon James now has customers deploying licences to 1.5m users across 60 organisations in 12 countries. Combining the insight we have from this customer base and the many hundreds of new customer requirements we are working to deliver against from new organizations and countries has contributed significantly to our comprehension of the wider environment and our future vision.

Our software components sit at the heart of many secure messaging infrastructures that cater to specific Communities of Interest (CoI), all of which are steadily evolving and refreshing to meet ever more complex requirements in the 21st century. As such we have seen some key changes in the underlying drivers that determine the purpose of military and intelligence based communications systems namely:
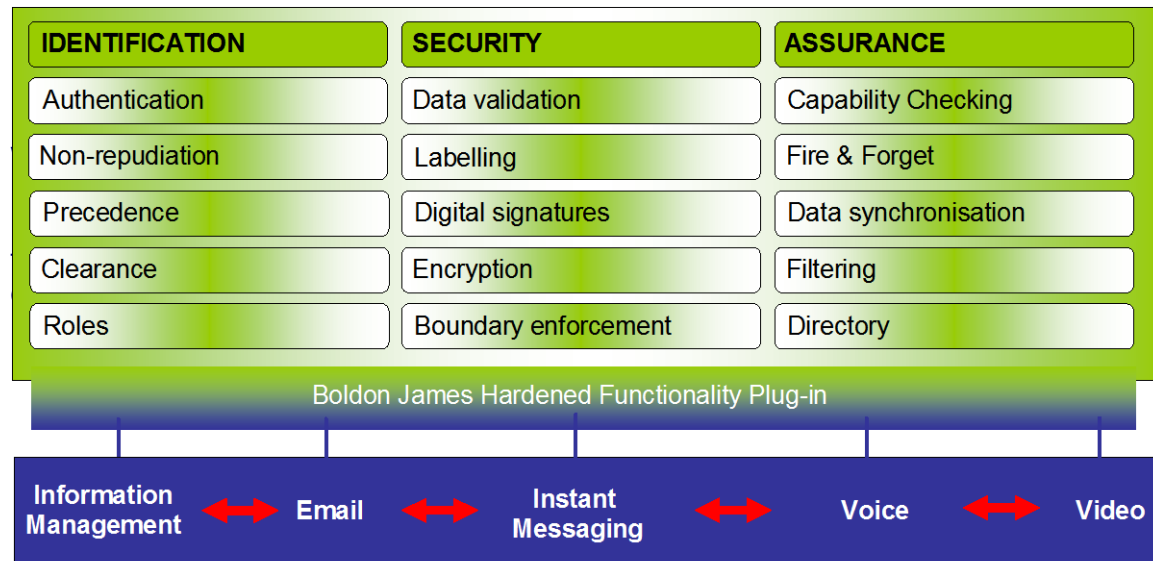

- The "Need to share" versus the "Need to know"
- Requisite knowledge at the point of action
- Automation in line with user growth
- Data sharing technology propagation

Diagram of hardened requirements evolution and interaction with communications mechanisms.

Since the 1990's we have progressively developed our product set portfolio from Secure Email to include Directories, Gateways and Chat across Microsoft platforms comprising today's environment, and our strategy is firmly aligned with Microsoft's Unified Messaging direction, which offers tremendous business advantage through designed pre-integration of Email, Chat, Video, Voice & Information Management applications. Boldon James now intends to further build on our position as the premier provider of 'hardened' functionality required by military & intelligence organizations, specifically in the following 3 key areas of Identification, Security & Assurance.

Diagram of Boldon James' functional relationship with Microsoft communications platforms.

IDENTIFICATION	SECURITY	ASSURANCE
Authentication	Data validation	Capability Checking
Non-repudiation	Labelling	Fire & Forget
Precedence	Digital signatures	Data synchronisation
Clearance	Encryption	Filtering
Roles	Boundary enforcement	Directory

Boldon James Hardened Functionality Plug-in

Information Management ⟷ **Email** ⟷ **Instant Messaging** ⟷ **Voice** ⟷ **Video**

Microsoft Unified Messaging

About Boldon James
Boldon James has over twenty years experience specialising Military Message Handling Solutions (MMHS) tailored to meet the formal messaging requirements of the worldwide Defence, Homeland Security, Aviation and Government sectors. Using extensions to Microsoft commercial off-the-shelf (COTS) software, Boldon James provides the added functionality that these customers require, but retains the ease of use and implementation of a COTS solution. This results in solutions with a low total cost of ownership and significantly reduced deployment risk. Boldon James is both a Microsoft Certified Partner and 'Global Go To Market Partner for Defence and Public Security'.
